## Cost control, efficiency and security

Hauliers these days are confronted with increasing costs, tougher and tougher competition and a rising occurrence of security issues out on the road. The transport sector is also becoming more and more complex, where different parties have to work together and goods are being transported over long distances.

b.Alert offers the solution at very low cost.

b.Alert gives an overview and an analysis of the real usage of your trailers. This will provide you with the information that you need to utilise your trailers in the most efficient way and to see where the profits and the losses are. b.Alert also measures the real loading and unloading times.

b.Alert manages the maintenance of your trailers efficiently and easily. Usually maintenance is planned at regular time periods so only partially worn-out parts and tyres can get replaced and thrown away if the mechanic judges that they cannot last until the next planned maintenance. b.Alert offers smart tools to solve this, giving dramatic savings on tyres and other consumable parts.

Clients want to know in real time where their goods are. Planners need to know the availability of the trailers. b.Alert delivers this information in real-time.

Unfortunately trailer loads as well as the trailers themselves do sometimes get targeted by thieves. b.Alert will alert you about unwanted intrusions and, in the worst case, of course enable you to locate a stolen trailer.

More and more transport legs are unaccompanied or entrusted to sub-contractors. It is virtually impossible to monitor them. b.Alert will do this and prevent improper use of your equipment.

- ✓ real time information for clients and planners
- ✓ optimization of trailer usage
- ✓ measurement of real loading times
- ✓ reduction in maintenance cost
- ✓ monitoring of sub contractors
- ✓ theft protection of load and trailers
